Abstract

Here will be a short paragraph about the contribution.

Introduction

Blah blah blah We worked together, but each one was assigned to a specific issue, and he undertook all the work on this issue, regarding branching, writing, communicating, opening PR and solving changes required. However, as stated before, we worked together for all issues, via teamviewer. Even though all the previous actions, were performed by one member, we were constantly ...klp

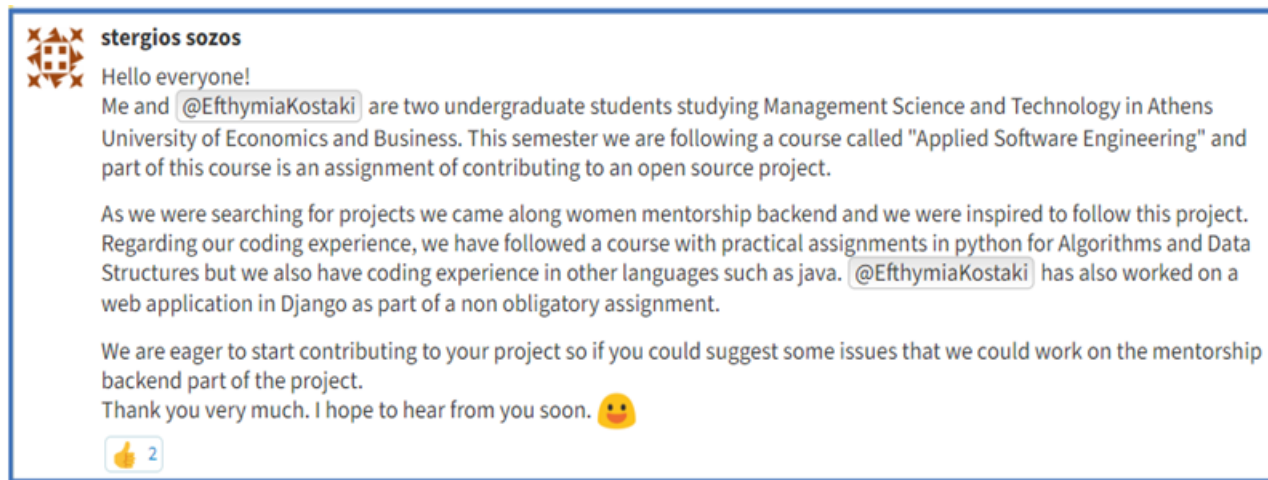

1 Project Selection Process

We utilized all the resources for finding an Open Source Project and we found more useful for us the site CodeTriage where we could explore different projects according to their programming language. We organized the projects according to the frequency of update, the variety of contribution from different nationalities, gender etc. and how often where pull requests accepted, and issues generated. We focused mainly in JAVA and Python. We chose 3 of these OSS projects to install and build and also discussed with Mr Gkortzis our choices and their implementation. Due to operation system requirements (Windows) we disregarded one of them, Pretix, and focused on the other 2. We successfully built Mentorship Backend and that's the project we worked on. It can be found here: <https://github.com/anitab-org/mentorship-backend> Why we chose Mentorship Backend

- Python language
- Another entry in the list
- Use of Google Python Style Guide, contributing guidelines and general guidelines
- Communication on a daily basis on zulip chat

- Focus on issues for First Timers
- Interested in trying to contribute in the project also on the Android development part

2 Initial Communication with the community

Description

As a developer,
I need to know what are the test cases for a certain API,
so that I can write new unit tests.

As a tester,
I need to know what are the test cases for a certain API,
so that I can perform manual tests on the API.

The task is to come up and add a quality assurance table to the docs in the `/docs` folder.

Acceptance Criteria

Update [Required]

- ☐ Add test cases for Update Task API

Definition of Done

- ☐ All of the required items are completed.
- ☒ Approval by 1 mentor.

Description

As a developer, i need to see the same way for displaying messages on the backend server. so that i can follow the same pattern on the messages im writing. Right now the messages are shown in 2 ways:

Code	Description
218	<pre>const comment = await sequelize.query('SELECT * FROM comments WHERE user_id = ? AND mentor_id = ?')</pre>
420	<pre>const user = await sequelize.query('SELECT * FROM users WHERE id = ?')</pre>
421	<pre>const mentor = await sequelize.query('SELECT * FROM mentors WHERE id = ?')</pre>
422	<pre>const relation = await sequelize.query('SELECT * FROM mentorship_relations WHERE user_id = ? AND mentor_id = ?')</pre>
423	<pre>const message = await sequelize.query('SELECT * FROM messages WHERE user_id = ? AND mentor_id = ?')</pre>
424	<pre>const relation = await sequelize.query('SELECT * FROM mentorship_relations WHERE user_id = ? AND mentor_id = ?')</pre>

Code	Description
425	<pre>const message = await sequelize.query('SELECT * FROM messages WHERE user_id = ? AND mentor_id = ?')</pre>
426	<pre>const message = await sequelize.query('SELECT * FROM messages WHERE user_id = ? AND mentor_id = ?')</pre>
427	<pre>const message = await sequelize.query('SELECT * FROM messages WHERE user_id = ? AND mentor_id = ?')</pre>
428	<pre>const message = await sequelize.query('SELECT * FROM messages WHERE user_id = ? AND mentor_id = ?')</pre>
429	<pre>const message = await sequelize.query('SELECT * FROM messages WHERE user_id = ? AND mentor_id = ?')</pre>

Acceptance Criteria

Update [Required]

Change the messages to either:
a)('message': 'User is already an Admin.')

or
b)User is already an Admin.

Definition of Done

- ☒ All of the required items are completed.
- ☒ Approval by 1 mentor.

Description

As a user, when I try to complete a task I need to know what I did wrong and why what I expected did not happen.

I observed that when a request id is not accepted and a user tries to complete a task (which does not exist, as a task cannot be created) the message is about the wrong task, but it should show the initial problem too, that the relationship is not accepted.

To Reproduce

Steps to reproduce the behavior:

1. Send a relationship request from user1 to a user2
2. Do not accept that request from user2
3. Try to complete a task (the number will be random as a task cannot be created)
4. See the error message, about the task not existing, but not about the relationship not having been accepted

Expected behavior

The message should inform the user trying to complete the task that the relationship is not accepted too.

Screenshots

Server response	
Code	Details
404	Error: NOT FOUND
	Response body
	<pre>{ "message": "Task does not exist." }</pre>
	Response headers
	<pre>content-length: 42 content-type: application/json date: Sun, 12 Apr 2020 12:38:33 GMT server: Werkzeug/0.14.1 Python/3.7.4</pre>
